

AP STATISTICS

The most "unlike-math" Math course you will ever take!

Why? Most businesses and college degrees (psychology, sciences, math, business, music, the list goes on and on...) require knowledge of probability and statistics. This is the most useful (and fun) math course you'll ever take.

What? Determine probabilities, odds, perform statistical experiments with flying frogs and jumping beetles, read the newspapers and interpret all those numbers they throw at you, work with computer statistical software (the work can be fun!), take Barbi bungee jumping!

What else? Learn other math topics often not seen in the traditional courses, "Why they demoted Pluto". The fun stuff!

WHAT FOR? A genuine math credit. It'll look good on your transcript! (And you'll have fun!)

Who should you tell? Your parents, your friends. I'll bet they're playing with this at work, and having fun!

WHY? 'Cause you're probably gonna need it sooner or later so take it while it's free (and fun!)

Sign up for AP Statistics!

Odds are - you'll be glad you did!
